

Dismantle (Working Title) - Supplementary Notes

Organizing the handwritten notes (2026-09-10) and how they should be reflected in the main document v0.2

Four pages of handwritten planning notes were transcribed and organized, then mapped to the relevant chapters of the main Dismantle (Working Title) Game Design Document v0.2. This document rewrites the notes in documentation language; it does not replace the main document. Any conflicts with the main document are collected in Chapter 8 and are intended to be incorporated into the next version, v0.3.

Item	Details
Document type	Supplementary notes (transcription and organization of handwritten notes)
Version and date	v0.2-A / September 10, 2026
Related main document	Dismantle (Working Title) - Game Design Document v0.2 (10 pages)
Source material	Four photographed pages of the planner's handwritten notes. They are labeled M1-M4 in this document for convenience.
Audience	Planning, development, and art teams
Status	Transcription stage. Numerical values and implementation methods are not finalized. Uncertain readings are listed in Chapter 9.

Relationship to the main document

Chapter in this supplement	Content	Connects to main document
1 Setting and flow	Octopus-type kaiju collapsed in the city; lobby is in the city; dedicated truck takes players to the work site.	1 Concept / 6 Design
2 Screen layout	Clean transcription of the UI sketch: cleanup meter, life, and four inventory slots.	7 Cooperative play and interface
3 Lobby store and life	Gas mask, gun, cutting tool, healing; life decreases in gas.	2 Cutting / 3 Gas / 5 Weapons
4 Kaiju = mountain contents	Eggs, small enemies, and poison gas are revealed by cutting, serving the role of colored rocks.	3 Gas / 4 Eggs / 5 Enemies
5 Upgrade elements	Drone, turret, PET (egg gacha).	2 Cutting / 4 Eggs
6 Appearance	Yellow hazmat suit; costume gacha only changes color.	6 Design
7 Expansion options	If the hook is weak, add roles; add more stages.	8 Scope / 9 Open items
8 Differences from main doc	Bring PETs into scope; add healing and life; resolve the two egg systems, etc.	9 Decisions and open items

The handwritten phrase “copy it as-is” is rendered here as “follow the reference title's system.” The intended meaning is unchanged.

1 Setting and Flow

Setting and lobby flow - M1

Original note: “Start with an octopus-type kaiju that has collapsed in the city. / For the lobby, maybe players go from the city to the site in a dedicated truck? / -> It can be as simple as Flatten the Mountain.”

1.1 First kaiju

[Direction] The first creature is an octopus-type kaiju collapsed in the city. This is the planner's answer to the “first creature to implement” item that was still undecided in main document 6.3. Squid and hermit crab remain candidates for later stages.

1.2 Lobby and work site

Location	Role	Notes
Lobby (city)	Buy equipment at the store (Chapter 3). Meet up with teammates.	Keep city detail minimal. Equivalent to the lobby in the reference title.
Dedicated truck	Presentation and transition from the lobby to the work site.	The travel itself is not gameplay. It can be used to present loading/matchmaking. [Candidate]
Work site	The fallen kaiju is the “mountain” that players dismantle.	The core loop from Chapter 1 of the main document happens here.

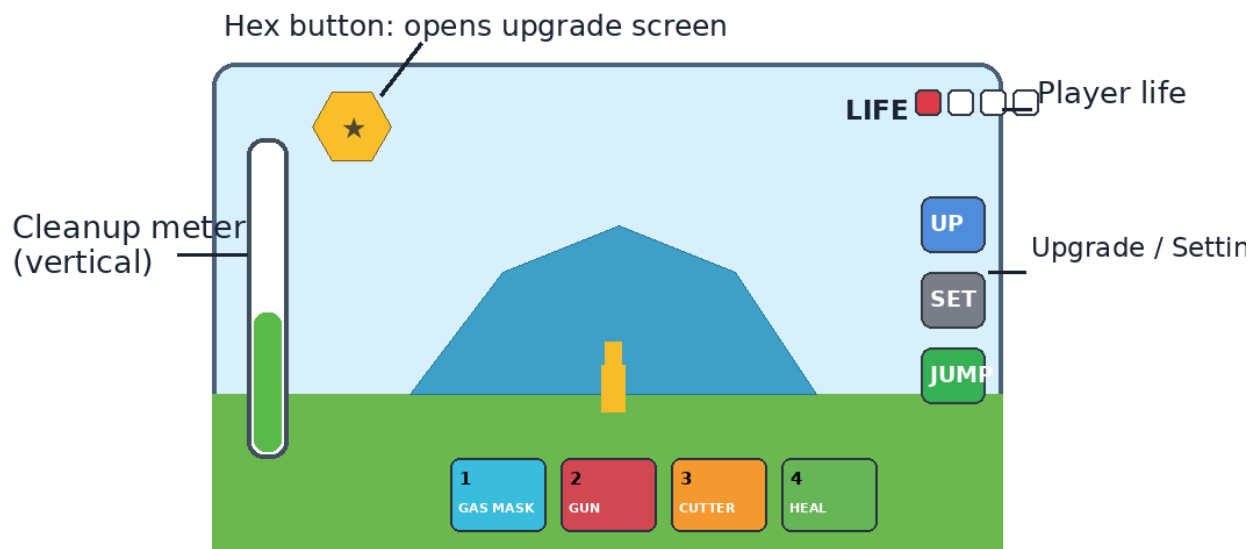

1.3 Keep it simple

The note repeatedly asks for the same level of simplicity as “Flatten the Mountain.” This supports keeping the items listed as out of scope in main document 8.2 - transportation gameplay, processing machines, and city restoration - outside the scope.

[Unconfirmed] Whether to include the truck sequence and how long it should be; how players meet in the lobby. Decide this together with the join/leave rules from main document Chapter 7.

2 Screen Layout

Screen layout - M2

Inventory: about 4 slots (gas mask / gun / cutter / healing)

Figure A1. Screen layout - clean redraw of the M2 sketch.

Sketch element	Interpretation	Relationship to main document
Cleanup meter (vertical bar at left)	Shows how much of the kaiju has been removed. Rises from 0 to full; reaching full clears the stage.	One possible display format for main document 7.2, "team-shared cleanup percentage."
Life (heart / boxes)	Player health. It decreases in gas when no mask is equipped (Chapter 3).	New element not present in the main document. Addressed in Chapter 8.
Upgrade / Settings / Jump	Buttons arranged vertically on the right.	Placement is illustrative only.
Inventory (four slots at bottom)	Gas mask, gun, cutting tool, healing. The note says "around four?" so slot count is still under consideration.	The exclusivity problem in main document 7.3 remains: players must be able to use weapons while wearing a mask.
Hex button	Pressing it opens something; follows the reference title.	Can be interpreted as the entry point to the drone/turret upgrade screen. [Inference]

3 Lobby Store and Player Life

Lobby store and player life - M2

Original note: “Things to buy at the lobby store: (1) gas mask -> gas appears and visibility gets worse; if you do not wear it, life keeps decreasing. (2) gun -> for fighting when enemies appear. (3) digging tool -> replacement for the usual pickaxe. (4) healing -> something that heals yourself or allies.”

Category	Definition in the note	Place in main document	Difference from main document
1. Gas mask	Gas makes visibility worse. If not worn, life decreases.	Chapter 3 - Gas mask	Adds “life decreases.” The main document left the gas effect undecided.
2. Gun	Used to fight when enemies appear.	Chapter 5 - Weapons	Same. Keep the ray gun / bazooka hierarchy from the main document.
3. Cutting tool	Replacement for a pickaxe; something like a cutter used for dismantling.	Chapter 2 - Handheld tools	Same.
4. Healing	Heals yourself or teammates.	-	New element. v0.1 said no healing facility would be added, but healing as an item is now introduced.

3.1 What adding life brings with it

If players have life, the game must define what happens at zero life: downed state, recovery, or failure. Main document 9.2 “Down and failure” remains undecided, and the notes do not specify it. Because the healing item is described as something that “heals allies,” there is room for a cooperative mechanic where a downed teammate can be revived. [Inference]

3.2 Where purchases happen

The notes place all four equipment categories in the lobby store. Main document 2.2 assumed that income earned at the work site could be spent immediately. One possible split is: only drone and turret upgrades are bought on-site, while equipment is bought in the lobby. [Candidate] This directly connects to the run-to-run carryover design in main document 9.2.

[Unconfirmed] Amount of life, healing amount, how purchases are divided between lobby and site, and what happens when a player is downed.

4 The Kaiju as a Mountain, and What Is Inside

The kaiju as a mountain, and what is inside - M3

Original note: "The kaiju is huge (like a mountain). A super-huge octopus type. / Eggs are in places like this. / Small enemies are hiding in places like this. / Poison gas is pooled in places like this. / Everything comes out when you dig (the role of the colored rocks in the flattening game)."

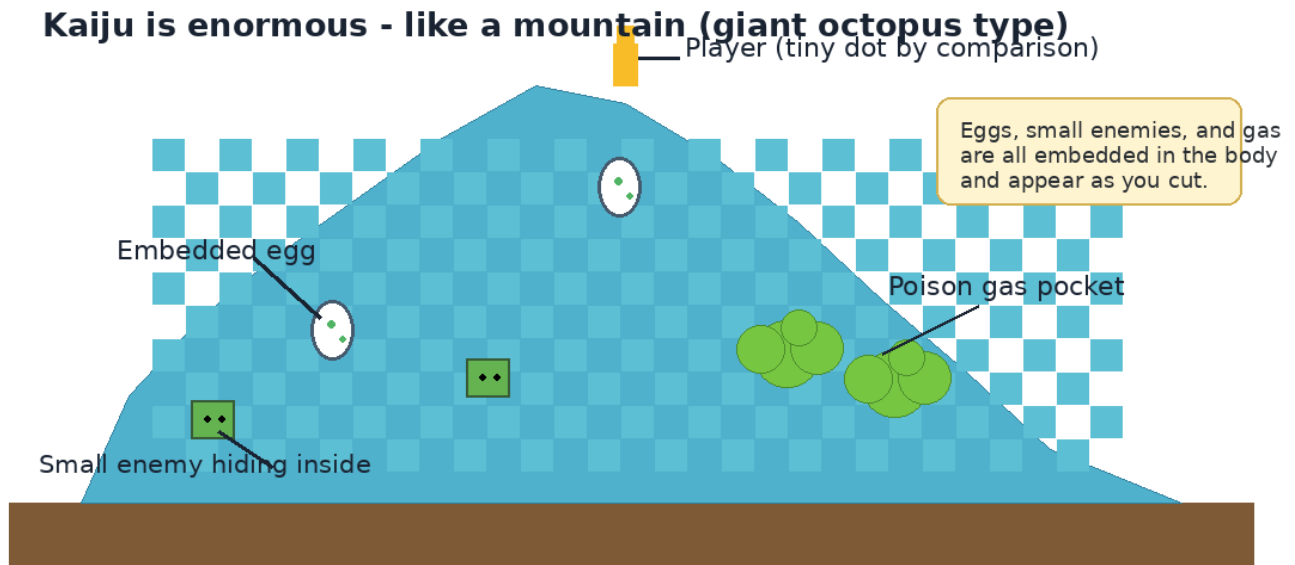

Figure A2. Kaiju cross-section and embedded objects - clean redraw of the M3 sketch. Same intent as Figure 01 in the main document.

4.1 Treat all contents as “embedded objects”

The key organizational point in the notes is that eggs, small enemies, and poison gas are all treated like the “colored rocks” in the reference title. In other words, all three are embedded inside the kaiju and are exposed when the body is cut. The main document discusses them separately in Chapter 3 (gas), Chapter 4 (eggs), and Chapter 5 (enemies), but implementation could handle them through one shared system: an embedded-object table.

Embedded object	What happens when exposed	Main chapter	Implementation view
Egg	Becomes exposed; opening it gives a reward or an enemy.	4	“Good result” branch of the colored-rock system.
Small enemy (parasitic mini-kaiju)	Jumps out and attacks.	5	“Bad result” branch. Consider whether to merge with enemies that come from eggs.
Poison gas pocket	Gas bursts out; life decreases without a mask.	3	Position-based hazard. “Spawn frequency” becomes embedded-object density.

4.2 Impact on the main document

- Main document Chapter 3 says a system where events occur at fixed cleanup percentages is not adopted. The embedded approach satisfies this naturally: events are determined by location, not progress percentage.
- With embedded objects, drone/turret auto-dismantling can also expose them, so events still happen as automation improves.
- If embedded-object placement changes by kaiju, the difference between kaiju becomes both the shape of the “mountain” and what is inside it.

[Unconfirmed] Density and placement rules for embedded objects (random or hand-placed); whether to keep enemies from eggs separate from small enemies already embedded in the body, or merge them.

5 In-Game Upgrades and PETs

In-game upgrades and pets - M4

Original note: “In-game upgrade elements: (1) drone (copy it as-is), (2) turret (this too), (3) PET <- gacha. This is a new element: buy an egg in the SHOP, and alien children or kaiju children become PETs that help you. -> They mine together with you. You can bring up to two.”

Element	What the note says	Place in main document	Notes
1. Drone	Follow the reference title's system.	Chapter 2 (main progression axis)	Matches the main document.
2. Turret	Follow the reference title's system.	Chapter 2 (main progression axis)	Matches. Whether turrets attack enemies is still unconfirmed.
3. PET	Buy eggs in the SHOP; alien children or kaiju children become PETs. They help dismantle. Up to two can accompany the player.	- (main document currently treats this as out of scope)	New element. Conflicts with the end of Chapter 4 and 8.2. Addressed in Chapter 8 here.

5.1 PET design

Item	What can be read from the note	Unconfirmed
Acquisition	Buy an egg in the SHOP (gacha).	Currency (in-game money or Robux), drop rates, duplicate handling.
Types	Alien child, kaiju child.	Number of types, rarity, visual differences.
Effect	Helps with mining/dismantling.	Contribution to dismantling speed, combat participation, growth/levels.
Limit	Up to two can accompany the player.	Whether expanded companion capacity is sold.

5.2 There are now two egg systems

The eggs in main document Chapter 4 are found inside the kaiju: a good result gives a reward and a bad result releases an enemy. The eggs in the handwritten note are bought in the SHOP and produce PETs. Because both use the same word “egg” but have different sources and outcomes, v0.3 should choose one of the following to avoid player confusion and implementation mix-ups:

Option A: Use different names. For example, keep field eggs as “Eggs” and call the SHOP version “PET Eggs.”

Option B: Merge the systems. Instead of simply defeating a field enemy (kaiju child), allow the player to “capture” it as a PET candidate, while the SHOP handles enhancement/gacha. This increases the value of bad-result eggs and weakens the “do not open eggs” problem from 4.4.

Option C: Make SHOP eggs PET-only and state clearly that PETs never come from field eggs.

My view leans toward Option B, but it requires the most implementation work. A realistic path for the prototype is to start with Option C and grow toward B. [Inference]

6 Appearance: Hazmat Suit and Costume Gacha

Hazmat suit and costume gacha - M3, M4

Original note: "Maybe the player should wear a yellow protective suit like the ones in Backrooms-type scenes. / Costume gacha: you can pull in-game costumes (hazmat suits, etc.) -> only the color changes."

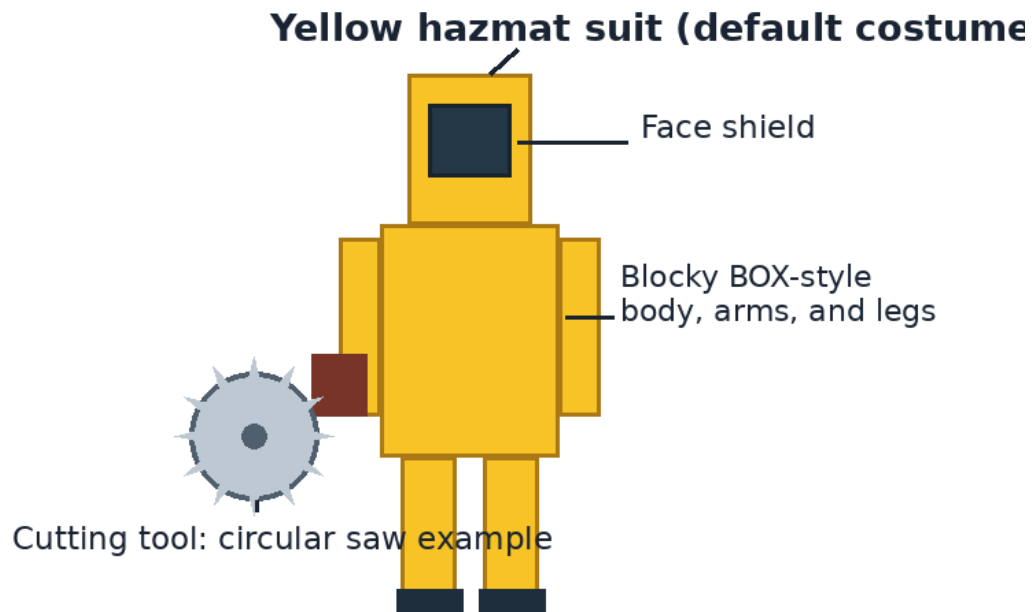

Figure A3. Player concept - clean redraw of the M3 sketch.

Element	Content	Relationship to main document
Yellow hazmat suit	Default worker costume. Hooded; shown holding a circular saw.	Add as the clothing direction under Chapter 6 "BOX-type avatar." The yellow also improves readability against a blue-toned kaiju.
Costume gacha	Produces color variations of the costume. No gameplay-stat differences.	New monetization element not in the main document. "Only the color changes" can be read as a direction to avoid pay-to-win.

[Unconfirmed] Gacha currency, number of colors, whether there are costumes other than hazmat suits, and whether PET gacha and costume gacha use the same purchase flow.

7 Expansion Options

Later additions - M1

Original note: "Additional elements: (1) if the hook is weak, create roles. (2) add stages."

Item	Condition	Relationship to main document
Roles (class specialization)	A later addition if the initial version's hook feels weak. Do not include from the start.	Does not conflict with main document Chapter 7 "no fixed role assignment." Add to Chapter 9 as a conditional later idea.
Additional stages	Increase kaiju varieties (squid, hermit crab, etc.).	Same as the candidates in main document 6.2. Changing embedded-object layouts changes both the shape and contents (4.2).

The criteria for deciding that "the hook is weak" are outside the scope of this document. They belong to the separate operational decision framework ("home-run theory").

8 Differences from Main Document v0.2 and Reflection Policy for v0.3

Deltas against the main document

Issue	Main document v0.2	Handwritten note	Proposed reflection in v0.3
PET	Out of scope (end of Chapter 4 / 8.2).	Adopt as a new element. SHOP egg gacha; bring up to 2; helps with dismantling.	Move into scope, but do not include in the first prototype feature set. Resolve the two egg systems using 5.2.
Healing	No healing facility (v0.1 6.3).	Buy healing items at the store; heal yourself and allies.	Adopt as an item; continue to avoid a healing facility.
Life	No description; down/failure undecided.	Life exists; decreases in gas without a mask.	Adopt life. Decide down-state behavior in 9.2. Consider allowing healing items to revive allies.
First kaiju	Unconfirmed (octopus/squid/hermit crab candidates).	Octopus type collapsed in the city.	Record the octopus type as decided.
Lobby	No description.	City lobby; buy equipment at store; truck to site.	Add to Chapter 1. Decide in 3.2 whether equipment purchases should mainly happen in the lobby.
Gas / enemy / egg occurrence	Frequency and conditions undecided.	All are embedded in the body and appear when cut, playing the role of colored rocks.	Adopt embedded-object method. Rewrite "spawn frequency" in Chapters 3-5 as "embedded density and placement."
Costume	BOX-type avatar only.	Yellow hazmat suit; costume gacha changes color.	Add to Chapter 6. Create costume gacha as a monetization item.
Roles	No fixed jobs.	Add later if the hook is weak.	Add to Chapter 9 as a conditional later idea.
UI	Only required information is listed.	Layout sketch: vertical cleanup meter, life, right-side buttons, four bottom slots.	Bring into Chapter 7 as an illustrative layout. Keep the mask/weapon exclusivity issue explicitly unresolved.

8.1 My concerns

- The notes say to keep the game "as simple as Flatten the Mountain," but also add four elements: PETs, costume gacha, life, and healing. Each one is small, but together they exceed what should be included in the first prototype. A better match for the notes' own simplicity direction is to keep the first prototype focused on the validation items from main document 9.3 - the feel of cutting, growth from automated dismantling, and the motivation to open eggs - then add PETs, costumes, and life from the second prototype onward.
- Adding life and healing changes gas from a simple "visibility gets worse" presentation into a danger that can kill the player. That points in the opposite direction from the light, funny gas tone in main document 3.1 ("strange sound that makes players laugh"). If life is adopted, life loss should be gentle and healing should be inexpensive.

9 Transcription Uncertainties

Transcription notes

Location	Reading / interpretation	Confidence
M2 - note on cleanup meter	Looks like “zero to fif...” but the latter part is unreadable. Interpreted as a vertical bar that fills from 0 to full.	Low
M2 - hex (hexagonal button)	Read as “hex opens / follows Flatten the Mountain,” and inferred to be the entrance to the upgrade screen.	Medium
M3 - writing inside the upper-left circle	Read as either “example” or “another.” Interpreted as a note that the drawing is only one example.	Low
M4 - crossed-out area before item 3	A different idea before it was rewritten as PET. Content is unknown and is not transcribed.	-
M4 - crossed-out note at the end	A rewrite related to costume gacha. Only “the color changes” is treated as valid.	Medium
M2 - “keeps decreasing”	Interpreted as a restatement that “life decreases.”	High

Source: Four pages of handwritten planning notes photographed on 2026-09-10. Main document: Dismantle (Working Title) - Game Design Document v0.2. Figures A1-A3 are clean redraws of the note sketches for this supplementary document and are not final designs.
